

AIR FLUX SEPARATOR - DUST SEPARATOR (99 LITRES)

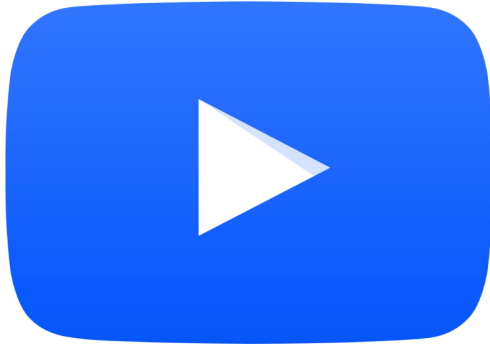

€103,30 (excl. VAT)

The Air Flux dust separator is designed to expand the capacity of almost any conventional dust collector and turn it into an efficient dust collection system. The 99 litre metal container has a level window, quick release hinges and castors. The separator captures sawdust, wood chips and other debris before it enters the dust collector, preventing loss of suction power due to a clogged filter. The base with five swivel castors makes it exceptionally stable and easy to manoeuvre around the workshop. The Air Flux Separator creates a cyclonic airflow that causes most wood dust particles and other materials heavier than air to separate, preventing them from entering the vacuum.
