

AIR FLUX SEPARATOR PARTS SET Ø 100 MM

€33,06 (excl. VAT)

Separate large wood chips from your system before they reach your dust collector. A pair of plastic elbow and coupling components serve as input and output points when you install them at either end of a barrel, bin, or other receptacle you plan to use to capture large wood chips. This system prevents wear and tear on your dust collector and you don't have to empty it as often. The two coupling components fit a standard 100mm hose.

This set comes with a template to make the correct holes in your container for mounting the two connection points.

Need inspiration? View the construction plan at [downloads](#) and easily create your own collection container.
