

BELMASH - DRIVE BELT FOR SDM2500

€24,79 (excl. VAT)

Spare poly-V drive belt for BELMASH SDM2500.

SKU: BEL-BM8PJ508

Spare poly-V drive belt for BELMASH SDM2500.

Poly-V belts are used to transfer torque between mechanisms. They have a flat surface on the outside and wedge-shaped ribs in the longitudinal direction on the inside, which provide increased elasticity, improved tear resistance and reduced heat generation. In addition, the poly-V belts allow you to work with the highest rotational speeds of small diameter pulleys. Also, these drive belts are less demanding to protect against

particles entering the pulley grooves, and their special composition gives all products high resistance to shock loads.
