

BELMASH - SDR2200 ALU PLANER AND THICKNESSER

€950,41 (excl. VAT)

NOW DELIVERED WITH THE NEW AL-Q GUIDE!

These portable and compact flat and thicknessing planers 230V are unique on the market. A 270mm wide steel planing spindle with 3 HSS 18% cobalt planing knives.

Equipped with an induction motor **3 HP**.

Includes: planer knives - guide - steel extraction hood

Optional: mobile base - top table

SKU: BEL-2200SDRNEW

GALERIJAFBEELDINGEN

BELMASH SDR-2200 is the most powerful, functional and productive machine in its class in the world and this with 100% attention to safety.

Functions: Planing, both flat and thicknessing.

This portable and compact planer / thicknesser 230V is unique on the market.

An induction motor has 30% more power than a carbon brush motor and is more than 40% quieter. Moreover, it is maintenance-free as no carbon brushes need to be replaced. Furthermore, they are driven in an industrial way by means of poly belts instead of classic V-belts. The construction of the frame is also very unique and

robust, as 3.5 mm thick sheet steel is used. This together guarantees excellent performance, but also optimal resistance for your machine.

Thanks to the micro-lifting system of the planing tables, the planing depth can be set very accurately and smoothly, but the tables can also be closed completely in a fast way. The SDR2200 has a very clear and accurate scale for each setting.

The planer fence is very robust and can be blocked in 2 places on the work table, which guarantees stable and precise work. It can also be angled with very clear reading. This model has a thicknesser built-in with automatic feed. The drive rollers are made entirely of steel and have double ball bearings. The safety hood is made of a metal housing with 2 support points for a quick change of planer or thicknesser. On the top table, all Belmash machines have a very unique and safe pressing system, this gives the correct pressure above the planing spindle and makes it impossible to come into contact with the planing knives with your hands.

The high-quality construction of these compact machines such as thick sheet steel, direct drive, induction motors, high-quality ball bearing, large and robust set and rotary handles give this machine an enormous user comfort with excellent performance and an optimal service life. The switch is located on a rotating arm and can be freely rotated to the right or left, in order to fix it in the most favorable position and to work safely at all times. This compact powerhouse is equipped with very robust handles for convenient storage or transport. The portable multifunctional woodworking machine comes standard with a set of knives, safety pressing system* and operating manual.

PRODUCT INFORMATION

- 230V, 3 HP powerful induction motor
 - No carbon brushes
 - 40% less noise, 30% more power
 - Thicknessing capacity 120mm
- Steel planer spindle 270mm with **three** blades
 - Compact multifunction machine
- Solid sheet steel tables 3.5mm thick
 - Drive by Poly-V belt
 - Rotatable switch
- Thicknessing planer with metal serrated drive rollers
 - Clear reading on steel band
