

SURFACE ROUTER FR66P

€395,70 (excl. VAT)

Virutex router for milling wood or plastics. The FR66P provides high precision and stability while working.

This makes the machine extremely suitable for most milling and copying work. The routing depth is adjustable between 0-60mm and is easily adjusted using six fixed positions. Thanks to its powerful motor and fixed adjustable height, this router is perfect for making dovetail joints (in combination with mould PL11). The inside of the milling machine has additional dust protection thanks to the rubber seals.

Standard delivered with guide ring Ø19mm.

SKU: VIR-FR66P

GALERIJAFBEELDINGEN

Virutex router for milling wood or plastics. The FR66P provides high precision and stability while working. This makes the machine extremely suitable for most milling and copying work. Ideal for deburring edges, copying, milling frames, etc. The routing depth is adjustable between 0-60mm and is easily adjusted using six fixed positions. The lateral conductor, in turn, is equipped with a micrometric control to work precisely at all times. Easy to set using a rotary knob. Thanks to its powerful motor and fixed adjustable height, this router is perfect for making dovetail joints (in combination with mould PL11). Equipped with a connection for dust extraction. The inside of the milling machine has additional dust protection thanks to the rubber seals. Standard delivered with guide ring Ø19mm.

PRODUCT INFORMATION

- Router milling machine
 - Depth: 0-60mm
- For most common routing and copying work
 - For dovetail joints
 - Precision and stability
 - Extra dust protection
