

CONNECTOR Y Ø100 - 2X 63MM

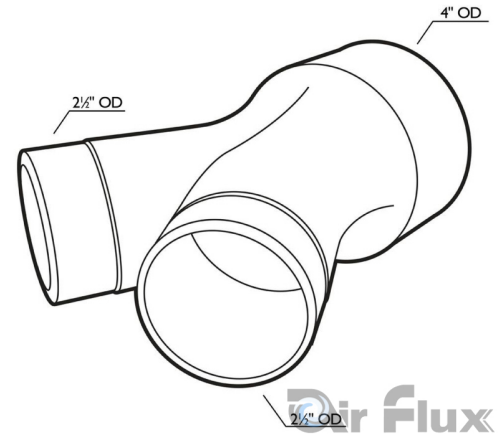

€12,40 (excl. VAT)

This connector offers two functions that can normally only be achieved by purchasing multiple connectors and hoses. First, it splits the mainline into two lines with an efficient, clog-resistant "Y" splice. Second, it reduces the hose diameter from a single 100mm hose to two 63mm hoses, allowing you to connect to smaller diameter general power tools including router tables, band saws and a small table saw.

Tip: For maximum efficiency of your extraction, reducers should be placed as close to the power tool as possible.
