

CORNER TRIMMER FR817T FOR PARQUET

€455,05 (excl. VAT)

Specially designed for levelling corners when sanding solid parquet or steps on wooden stairs. It makes it possible to level the corners that the traditional parquet sander cannot reach, keeping them level with the rest of the floor. The frontal guide or 'feeler' ensures that the cutter slides smoothly along the skirting board or wall and avoids damage. Easy to use, it is equipped with a connector for connection to an external dust extraction. This angle trimmer is equipped with a powerful motor (1000W) with electronic speed regulation and control. Thanks to this control system, the speed remains constant, even under load. Standard delivery with a V-angle router bit 90° and Ø12mm.
