

## KREG DRILLING JIG FOR LOADER RAILS

**€35,99 (excl. VAT)**

With the drill jig for loading rails, you can easily mount loading rails for drawers that fit perfectly and glide smoothly. The drill template for loader rails is suitable for cabinets with or without a front frame and for any type of rails, such as ball-bearing rails, epoxy-coated rails or bottom-mounted rails. This user-friendly drilling template has two hooks that hold the rails in place while you drill the mounting holes in the cabinet. With the built-in tabs, the hooks are easy to align on cabinets with a front frame, or with the markings on cabinets without a frame. The hooks of the drill template for drawer rails are also reversible, so that they can support the drawer itself while you attach the rails to it.

**SKU: KRE-KHISLIDEINT**

## GALERIJAFBEELDINGEN

Whether you want to refresh cupboards or create a completely new cupboard, the drawers are always a challenge. With the drill jig for loading rails, you can easily mount loading rails for drawers that fit perfectly and glide smoothly. The drill template for loader rails is suitable for cabinets with or without a front frame and for any type of rails, such as ball-bearing rails, epoxy-coated rails or bottom-mounted rails. This user-friendly drilling template has two hooks that hold the rails in place while you drill the mounting holes in the cabinet. With the built-in tabs, the hooks are easy to align on cabinets with a front frame, or with the markings on cabinets without a frame. Of course, you are not finished when the rails are mounted in the cabinet. This is why the hooks on the drill template for drawer rails are reversible, so that they can support the drawer itself while

you attach the rails to it.
