

DUROTEC POLISHING BRUSH DURO-POLISH

€78,51 (excl. VAT)

Duro-Polish is ideal for polishing and pre-polishing stainless steel. Thanks to the abrasive's lamellar structure, the felt is not "burned" during the polishing process, preventing streaking. It is important to use DuroPol only in combination with the right polishing paste: pre-polishing paste should be used for pre-polishing, while gloss paste is suitable for high-gloss polishing. This combination allows you to achieve high-quality polishing results without leaving streaks.

SKU: DUR-310117

GALERIJAFBEELDINGEN

Polishing brush for polishing stainless steel, metal, lacquer, etc. Slat structure prevents the felt from burning. This brush allows you to achieve high-quality polishing results without leaving streaks.

PRODUCT INFORMATION

- DuroPolish is suitable for polishing and pre-polishing stainless steel.
- Slat structure prevents “burning” of felt during polishing process and prevents streaking.
- Use DuroPolish only with the correct polishing paste: pre-polishing requires pre-polishing paste, high-gloss polishing requires gloss paste.
- Combination of DuroPolish and the right polishing paste ensures high-quality polishing results without streaks.

DESCRIPTION
