

ELECTRONIC ROUTER COMBI FR356Z

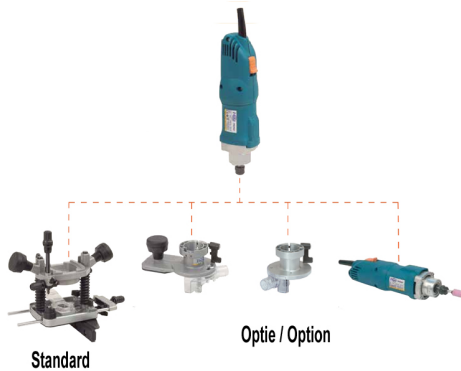

€432,81 (excl. VAT)

This multifunctional router is suitable for most milling and copying work. The FR356Z delivers high precision and stability while working, driven by a 1000W motor. In addition to the electronic speed control, the motor is also equipped with an electronic control system. With the help of this system, the speed remains constant, even under stress. Ideal for deburring edges, copying, milling frames, etc. As standard, this machine comes with a base for use as a router. In combination with other heads (not supplied as standard), you can also use the machine as a trimmer. Without use of a trimming head, you can also place a grinding stone and use the machine as a straight grinder.

When used with the base for routing supplied as standard, the milling machine has a micrometrically adjustable height control. Six fixed positions allow you to set the height to change quickly and easily while working.
