

KITCHEN CABINET SET PROFILE/COUNTERPROFILE + PANEL RAISING CUTTER BORE 50MM

€438,01 (excl. VAT)

This set consists of two cutter heads in light metal, equipped with tungsten carbide knives (HW). Make solid connections using the profile counterprofile cutter, or machine different profiles using the panel raising cutter. Together, these two cutter heads offer you everything you need to make high-quality, beautifully finished kitchen cabinet doors.

The profile cutter type A is fitted as standard to the profile counterprofile cutter (YH102BAM). Type B, C and D are also available on request. This cutter head has a diameter of 130mm.

The panel raising cutter (YH102BAM) consists of two knives that can be adjusted independently of each other. By aligning the knives differently in relation to each other, you have the possibility to create different profiles, for example with or without an upright edge. This cutter head has a diameter of 200mm. The milling height and cutting length depend on how you set the knives.
