

KREG CROSSCUT STATION KMA4100 SAW STATION

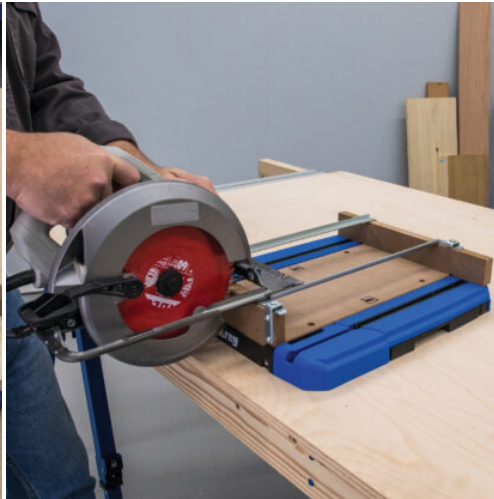

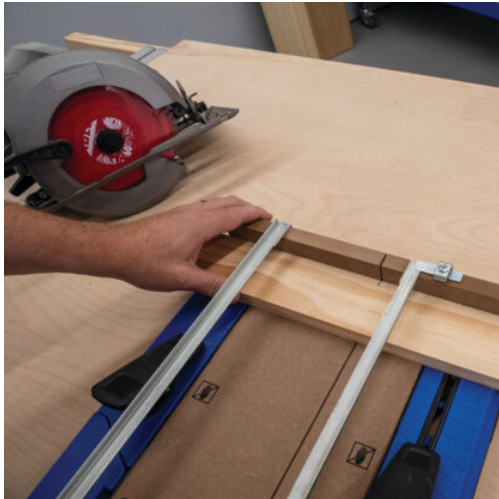

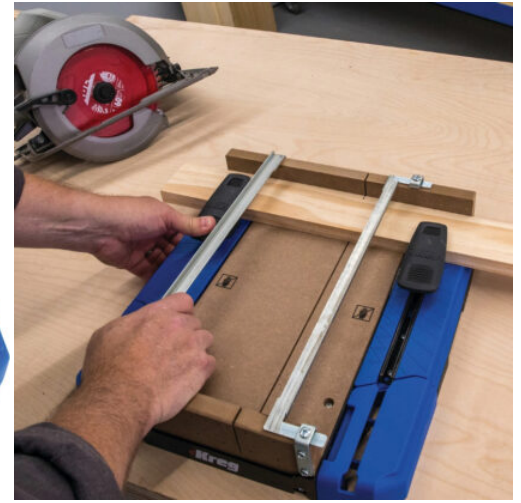

€71,99 (excl. VAT)

With the Kreg KMA4100 crosscut station, you can cut sheets up to 305 mm (12") wide quickly and accurately. You can also use this saw station to make mitre cuts of 0° to 45°. With the Kreg saw station, you can cut with your circular saw just as accurately as with a mitre saw.

The saw station contains two adjustable support rails for your circular saw. The rails can be adjusted exactly to your machine so that you cut at the right angle and straight. You can adjust the station precisely to your machine and know exactly where the saw blade will cut by drawing a cutting line in the rear wall.

With the Kreg KMA4100 crosscut station, you can cut boards up to 305 mm (12") wide quickly and accurately. You can also use this saw station to make mitre cuts of 0° to 45°. With the Kreg saw station, you can cut with your circular saw just as accurately as with a mitre saw.

The saw station contains two adjustable support rails for your circular saw. The rails can be adjusted exactly to your machine so that you cut at the right angle and straight. You can adjust the station precisely to your machine and know exactly where the saw blade will cut by drawing a cutting line in the rear wall.

With the Kreg sawing station you can not only support your sawing machine, but also stabilise your workpiece.

The station is equipped with two sliding fixation clamps. These clamps hold your workpiece firmly in place, allowing you to achieve a precise result. With the aid of the mitre stop, you can also make mitre cuts of 0° to 45° with the Kreg saw station. On the station, the angles are already marked. This allows you to easily adjust the angle of the station. The stop keeps your workpiece at the right angle.

The Kreg saw station has folding supports that allow you to support longer sheets of material. The protective caps at the ends of these supports can also be removed and moved around on your workbench to support even longer lengths. The supports can be easily folded back into the station. The anti-slip foot of the crosscut station keeps the station stable. For more permanent mounting, the station can be screwed to your workbench.

The crosscut station is compact and easy to assemble. This allows you to get started quickly and clean up the sawing station quickly. The sawing station is small enough to be transported and used as a mobile sawing station for quick jobs.

PRODUCT INFORMATION

- Sawing station for boards up to 305 mm width
- Compatible with almost all handheld circular saws
 - Mitre cuts possible
- Compact and quick to assemble
