

KREG MULTI-PURPOSE ANTI-SLIP BLOCKS

€21,99 (excl. VAT)

Kreg non-slip blocks are the perfect way to support, hold and finish projects anywhere. These incredibly versatile blocks lift your material up to a height of 38 mm above the work surface for convenient sanding, routing, finishing and much more. The blocks have a GripMaxx™ surface on each side - one side to grip your workpiece and one side to prevent the blocks from sliding around on your work surface. This is ideal for work such as sanding or painting.

SKU: KRE-KFS-PUCK

GALERIJAFBEELDINGEN

Kreg non-slip blocks are the perfect way to support, hold and finish projects anywhere. These incredibly versatile blocks lift your material up to a height of 38 mm above the work surface for convenient sanding, routing, finishing and much more. The blocks have a GripMaxx™ surface on each side - one side to grip your workpiece and one side to prevent the blocks from sliding around on your work surface. This is ideal for tasks such as sanding, so that your workpiece does not get out of place.

Raising the material makes milling edges easier, as there is more room for the milling bit. The height makes it easier to place the auxiliary head under the workpiece - which is useful when drilling pocket holes or assembling your project. When you want to paint or finish your project, you can use the retractable paint tip with GripMaxx™ for more height. Simply turn the anti-slip block to raise the tip and place your material on it -

the painting tips do not even stick to it.

PRODUCT INFORMATION

- Retractable paint dots
- GripMaxx anti-slip surfaces
- Hexagonal shape, does not roll
- Comfortable height of 38 mm
- Load capacity: 90 kg (set of 4)

DESCRIPTION

Kreg non-slip blocks are the perfect way to support, hold and finish projects anywhere. These incredibly versatile blocks lift your material up to a height of 38 mm above the work surface for convenient sanding, routing, finishing and much more. The blocks have a GripMaxx™ surface on each side - one side to grip your workpiece and one side to prevent the blocks from sliding around on your work surface. This is ideal for tasks such as sanding, so that your workpiece does not get out of place. Raising the material makes milling edges easier, as there is more room for the milling bit. The height makes it easier to place the auxiliary head under the workpiece - which is useful when drilling pocket holes or assembling your project.
