

KREG POCKET HOLE JIG 230 MICRO

€43,99 (excl. VAT)

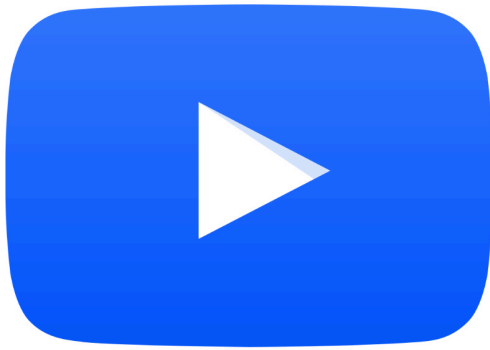

Like our accessories for the 500- and 700-Series Pocket-Hole Jig Micro-Pocket Drill Guide, the KPHJ230 Pocket-Hole Jig Micro creates a 33% smaller pocket hole that is ideal for smaller projects, thinner material and tighter repairs, but as a completely self-contained system. The Pocket-Hole Jig Micro has the same usability and versatility as our other portable Pocket-Hole Jigs. With a design to control multiple thickness settings, an easily adjustable drill bit and hardened steel drill guides, this is the perfect solution for strong pocket-hole joints in drawer boxes, mitred corners and more.

Micro-Pocket holes are great for almost any application where you would use normal pocket holes, especially for material 12 mm thick and narrow boards from 25 mm wide. As less material is removed, drilling operations are faster and easier.

Right out of the box, this Pocket-Hole Jig helps you make quick work of small projects. Compatible with Kreg pan-head pocket-hole screws.

SKU: KRE-KPHJ230
