

## KREG QUICK-FLIP

**€15,99 (excl. VAT)**

The Kreg Quick-Flip allows you to use Kreg screws for a variety of strong, simple connections - all with a single tool. You pre-drill on one side, then turn the Quick-Flip around and drill a Kreg screw in smoothly.

Thanks to the double action of this tool, you can quickly make connections with Kreg screws in many different applications.

Kreg screws are perfect for pocket-hole connections, but their strength and high-quality engineering also make them ideal for other applications. Use the Quick-Flip with Kreg screws to connect corners, attach false fronts to drawers and much more.

The Quick-Flip has an insert with two ends in a housing with a quick-release fastener. At one end, you will find a drill (drill hole) and a milling cutter that, by means of a counterbore, mills out a flat area into which a screw head fits. Then turn the insert to reveal the other end: a square drive bit, specially designed for use with Kreg screws.
