

KREG SWING STOP - FLIP STOP

€47,99 (excl. VAT)

The bushings of the Swing Stop™ reduce the play in the stop, for greater accuracy. The stop defines the distance between the end of the board and the blade, for accuracy and repeatability. When you are not using it, just swivel the stopper away. This stop fits the Kreg Top Trak and the Kreg Heavy-Duty Trak. This versatile stopper makes repetitive sawing easier than ever. It keeps exactly the measurements you set and is easy to push aside when you don't need it.

The production stop is suitable for use with the Kreg Top Trak and the Kreg Heavy-Duty Trak. This gives you the versatility to use the stop with different machines and in different ways. You place the stopper on the top of the track as you wish. This also makes it easy to lift the stopper out of the track and to move it.

Thanks to the robust aluminium construction of the Swing stop, the stop remains exactly in the set position. This stopper provides the rigidity and accuracy you need.

SKU: KRE-KMS7801
