	PIH-12300	300cm	€322,48 (excl. BTW)

### GALERIJAFBEELDINGEN

The Maxipress XXL is a cast iron clamp for heavier carpentry, bodywork, shipbuilding, etc. This clamp has a fully protected double screw thread, which protects it against external influences: pieces of concrete, steel splinter, welding particles, etc. The double screw thread multiplies both the speed as the printing capacity. The double thread provides a completely straight upward movement without torsion. In the rotating system of the protected double screw thread, a recess is provided to grease the screw. The Maxipress has round-shaped claws that allow you to work around corners or protrusions. The Maxipress is an extra resistant rolled steel bar treated with anti-rust. This glue clamp has a cast iron basin coated with epoxy paint,

## PRODUCTINFORMATIE

- For heavier carpentry such as bodywork, shipbuilding, etc.
- System with always fully protected screw thread: Doubles both speed and pressure capacity thanks to the double screw thread with triangular teeth
  - Fully straight upward movement without torsion
  - More pressure and grip than a standard head, even during clamping at an angle
  - Protection against external influences: pieces of concrete, steel splinter, welding particles etc ...
- Position system to prevent free fall of the claw
  - Nodular cast iron basin
- A recess is provided in the turning mechanism for greasing the screw
- Round-shaped claws that allow to work around corners or protrusions
  - Ribbed fixed support for ideal grip of pipes, profiles etc.
    - Anti-slip stop system on the moving jaw
  - Extra resistant rolled steel bar (90kg / mm<sup>2</sup>)
    - Anti-rust treated
